

# Installing Ghidra Extensions

## Requirements

Note that there is a very tight dependency on version chaining here. Double check that your errors aren't related to version support of features.

## Java

```
sudo apt-get install openjdk-<version>-jdk openjdk-<version>-jre  
sudo update-java-alternatives -l # Give list of all available java versions  
sudo update-java-alternatives -s <openjdk version> # Set the correct java version
```

## Gradle

Go to the gradle site and download their bin package Move the gradle extracted folder to /usr/share/gradle, double check your paths gradle -v should likely be newer than 8

## Plugin

Now you can build the plugin, install path for Ghidra is likely /usr/share/ghidra
