# pfsense dyndns

Configuring pfsense dyndns with namecheap is a big bag of bullshit

Remember to use the generated apikey as the password

host = "@" domain = owned domain

in namecheap use a + dynamic dns record, host = @, value = whatever

https://www.namecheap.com/support/knowledgebase/article.aspx/9646/2237/how-to-create-a-cname-record-for-your-domain
